Here's What 3

NEW CUTTING EDGES

GO TO WORK AS OLD ONES WEAR DOWN

At the time that other files begin seriously to lose their cutting ability, these New Nicholson Products gain a "second wind." For as the teeth which have been in use wear down, clean, sharp, brand-new cutting edges go to work to give the file a new lease of life and lower your filing costs enormously.

TIMES AS MANY CUTTING EDGES PER SQUARE INCH

Mean to You

THESE STATEMENTS . . ARE BASED ON RIGID TESTS . . . . PROVE TO YOURSELF THEY ARE TRUE . . MAKE ANY TESTS YOU WISH

NEW CAPACITY TO REMOVE METAL

Exhaustive tests on all kinds of metal under widely varying conditions have proved to us the unusual cutting capacity of these New Files. Yes! You will find an entirely new filing efficiency with this new product.

NEW RAPIDITY OF CUTTING

This new cutting power, plus a smooth ease of operation, gives these New Files a rapidity of cutting that permits you to turn out a given job, complete, in far less time than is possible with any files heretofore available.

ABSOLUTE FREEDOM FROM SIDE SLIP

The new tooth construction of these files eliminates side slip, heretofore an objectionable characteristic in the performance of files. These New Files cut straight and true, without any tendency to slip off the side of the work.

WE WANT FILE USERS

To Make This Test

To assure ourselves that every statement made about these new files is true, we have tested them on all kinds of metal under all possible conditions. But we realize that tests made in our Research Laboratory, however unusual the results, will not fully convince file users of the sensational advance these new files represent.

So we are urging file users everywhere to obtain these New Files — and to use them on their own work under conditions as they actually exist in their own plant. Then, and only then, will they have a true basis for comparison which will lead them to agree: "It's the greatest advance in file making in a generation."
